

Milks marketed for children from 1 year of age

Fortified milks for young children are marketed as growing-up or toddler milks, but there are no compositional, labelling and marketing regulations that specifically apply to these products and no agreed benefit from their use. These milks should not be used for children under 1 year of age. Unless otherwise advised children over 1 year of age who are not receiving breastmilk can have full-fat animal milk as their main milk drink.

Relative cost of this milk			
Cost per 100ml	16p	<i>For comparison:</i> Whole (full fat) cows' milk	7p

Notes

This milk has enhanced amounts of some nutrients but is also lower in vitamin B₁₂ and iodine than cows' milk.

It is generally recommended that toddlers eat a good variety of foods to supply the majority of their nutrients, rather than relying on fortified milk products to supply them.
